

ENGINEERING PROTOTYPE 5000

Awareness Technology has nearly completed the development a 2-plate automatic processor. The new instrument system, which operates similar to ChemWell but at increased capacity, is expected to be released for sale at the end of this year 2014. Several versions will be made available for various uses such as ELISA , CLIA, and a dual use ELISA/CLIA combination analyzer.

Detailed specifications are not available yet; however, this photo of an engineering prototype indicates the general capacity, layout and compact footprint of the new design.
